

# CANVAS EFFECT FILM

protection of  
prints with a  
refined finish

# PURE LINE

resistance to  
abrasions

separation with  
bursting systems

keeps excellent  
text readability

# CANVAS EFFECT

## Product features:

The **Pure Line** canvas effect film is characterized by a matt finish and a very pleasant canvas effect surface, suitable for refined and elegant realizations and for those who are looking for a material that enhances the graphic contents of communication.

The canvas effect of **Pure Line**, which is mainly optical, is obtained thanks to the application of a special “coating” on its surface. The perception to the touch is light but still present.

The particular production technique determines two important advantages: first of all, the film maintains a thickness that allows easy separation. The second advantage is the fact that the surface texture is not “flattened” during the application by the heat and pressure of the calender.

This special treatment also ensures that the film protects the prints from fingerprints and scratches.

The film is available in both dry and wet versions. Before carrying out subsequent processing, please consult the technical data sheet carefully.

## Main applications:

- Hard and soft book covers
- Notebooks and blocks for school and office use
- Business Cards
- Product Brochures
- Invitations and participations
- Labels

Code	Item	Finishing	Thickness Micron	Lenght Meters	Core mm
